

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claim 1. (Currently Amended) A portable communication apparatus, comprising:
a first housing including an open space and a pair of hinge supports, the open space having at least one opening, the hinge supports extending longitudinally and surrounding opposite sides of the open space;
a hinge axis extending across the open space;
a second housing including a first display, rotatably connected to the first housing to open from and close to the first housing; and
a third housing including a second display, extending in a longitudinal direction of the second housing to be accommodated in the open space to enable the third housing to rotate about the hinge axis, the first display and second display always facing upward in the same direction;
wherein the second display is always exposed regardless of open and closed states of the second housing to the first housing.

Claim 2. (Previously Presented) The portable communication apparatus according to claim 1, wherein the first housing has an upper surface including a plurality of keys and a microphone, and the second housing has a lower surface including a speaker device.

Claim 3. (Original) The portable communication apparatus according to claim 1, wherein the third housing is integrally connected to the second housing.

Claim 4. (Previously Presented) The portable communication apparatus according to claim 1, wherein a lower surface of the third housing protrudes from the lower surface of the second housing with a stepped shape.

Claim 5. (Currently Amended) A portable communication apparatus, comprising:
a first housing including an open space and a pair of hinge supports, the open space
having at least one opening, the hinge supports extending longitudinally and surrounding
opposite sides of the open space;
a hinge axis extending across the open space;
a second housing including a first display and a second display;
wherein said first display and said second display always face upward in the same
direction, and said second display is always exposed regardless of open and closed states of
the second housing to the first housing.

Claim 6. (Previously Presented) The portable communication apparatus according to
claim 5, wherein the first housing has an upper surface including a plurality of keys and a
microphone, and wherein the second housing has the lower surface including a speaker
device.

Claim 7. (Previously Presented) The portable communication apparatus according to
claim 5, wherein the second display is integrally connected to the second housing.

Claim 8. (Previously Presented) The portable communication apparatus according to
claim 5, wherein a bottom portion of the second housing protrudes from a top portion of the
second housing with a stepped shape.
